ELEMENTS OF ELECTRICAL ENGINEERING

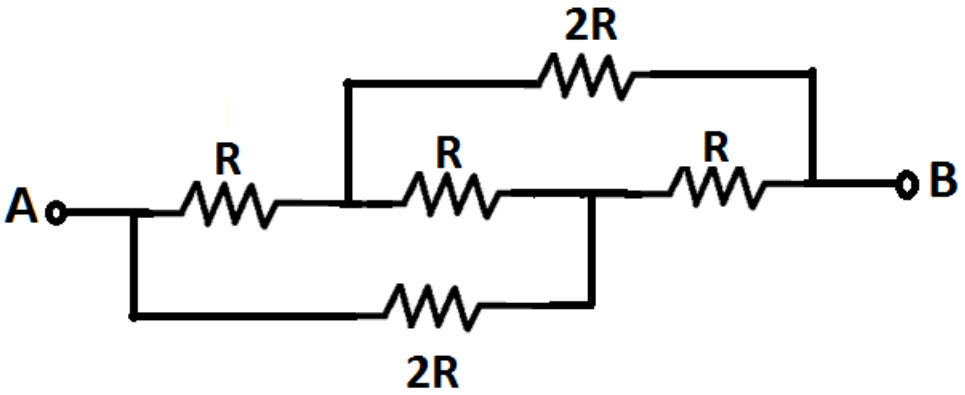
Star Delta Transformations – Numerical Example 3

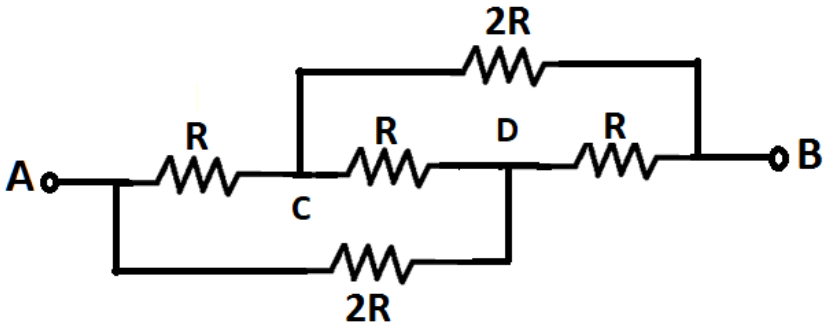
Question:

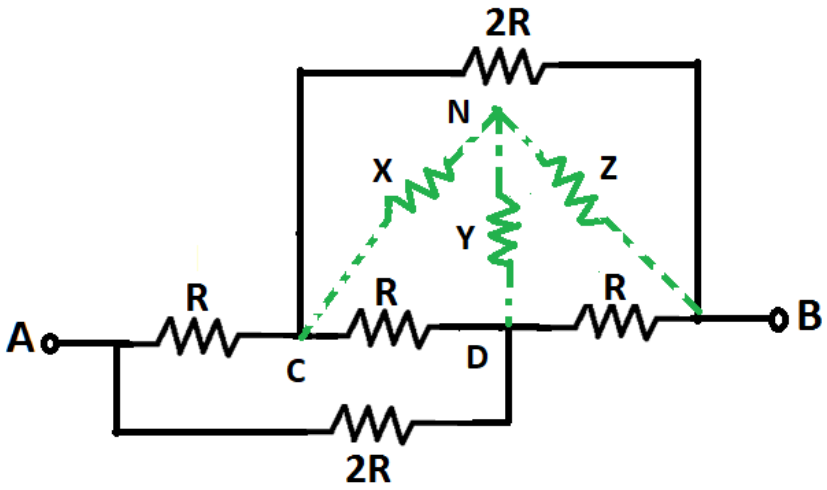
Find the equivalent resistance between the terminals A & B in the given network.



Star Delta Transformations – Numerical Example 3

Solution:





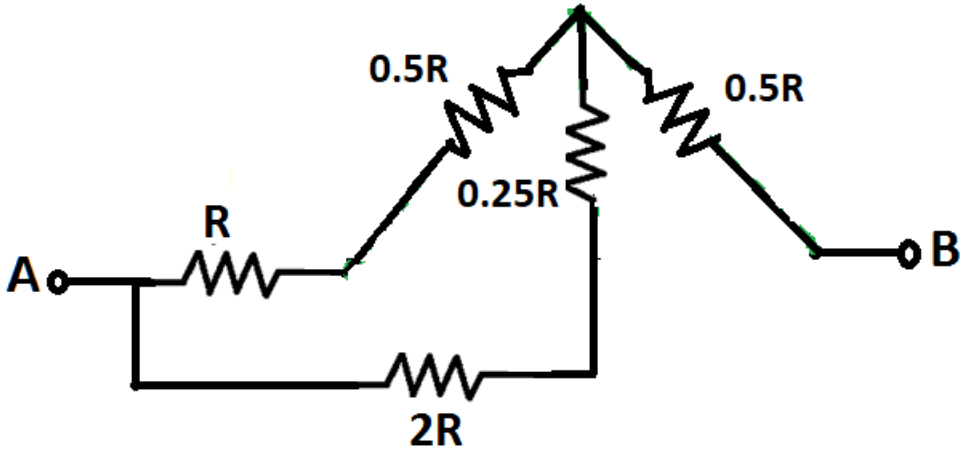
$$X = \frac{R*2R}{(R+2R+R)} = \frac{R}{2}\,\Omega$$

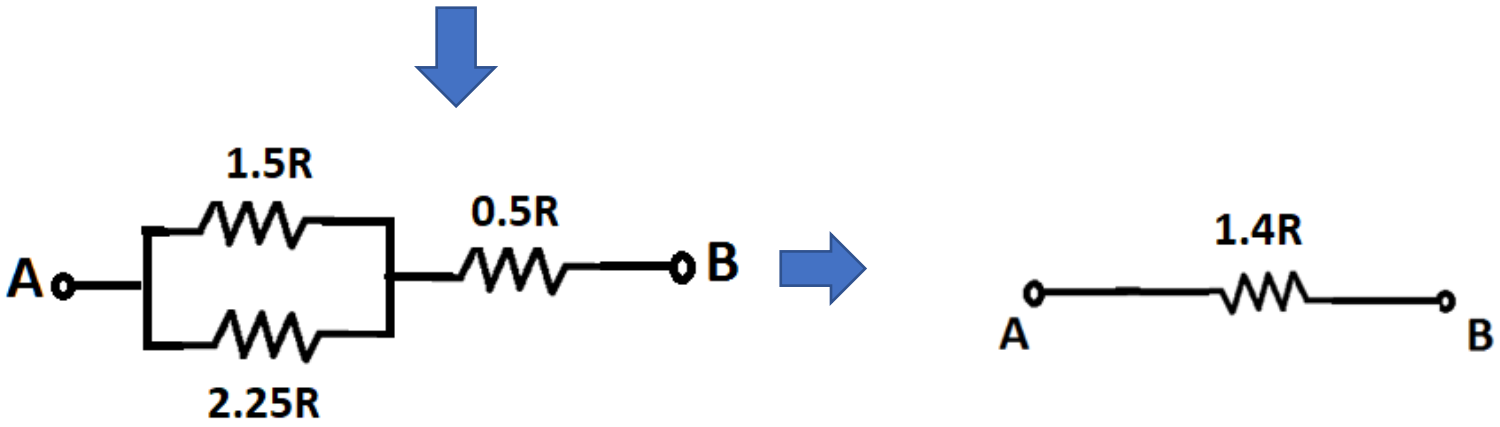
$$Y = \frac{R*R}{(R+2R+R)} = \frac{R}{4}\,\Omega$$

$$Z = \frac{R*2R}{(R+2R+R)} = \frac{R}{2}\,\Omega$$

Star Delta Transformations – Numerical Example 3

Solution (Continued..) :



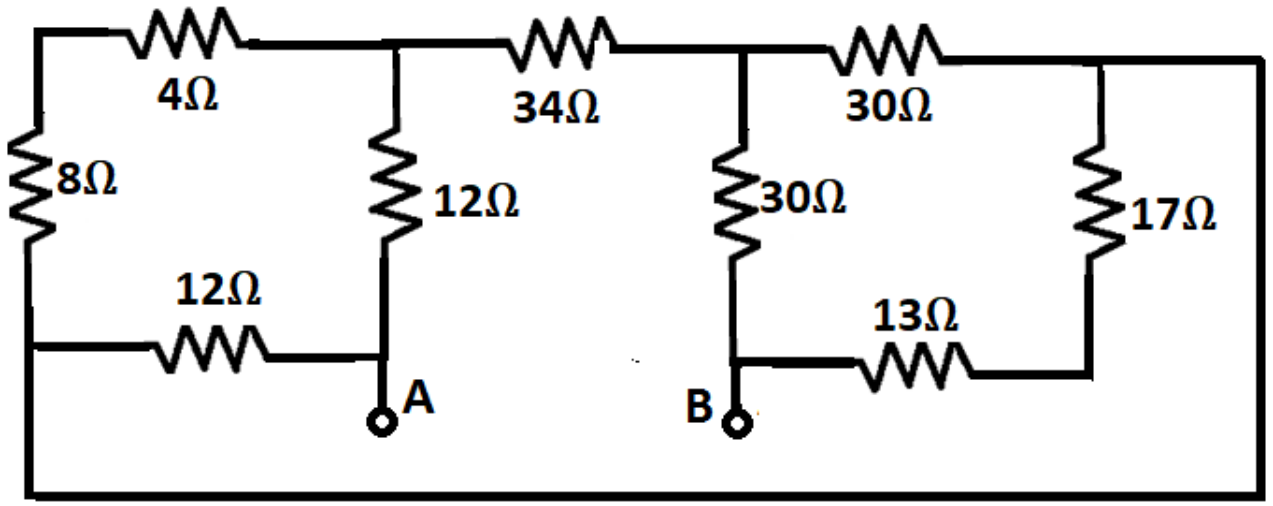


ELEMENTS OF ELECTRICAL ENGINEERING

Star Delta Transformations – Numerical Example 4

Question:

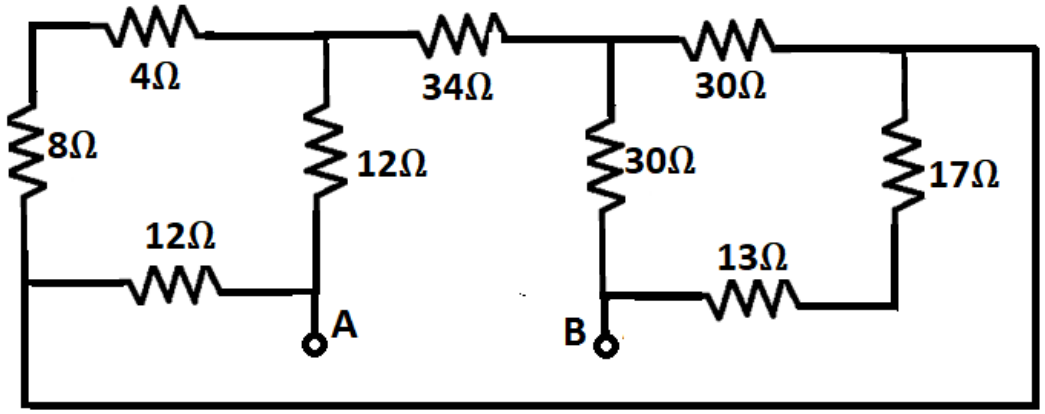
Find the equivalent resistance between the terminals A & B in the network shown.

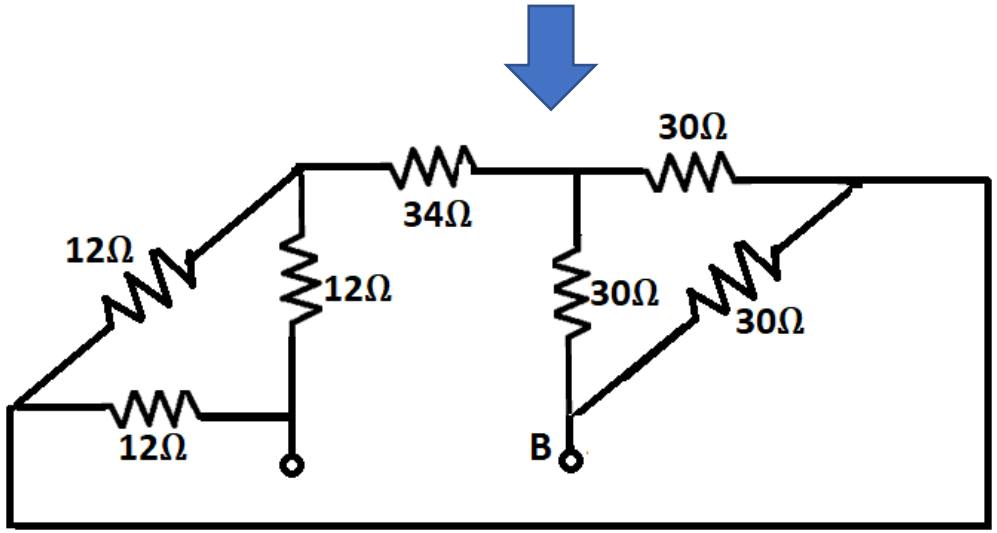


ELEMENTS OF ELECTRICAL ENGINEERING

Star Delta Transformations – Numerical Example 4

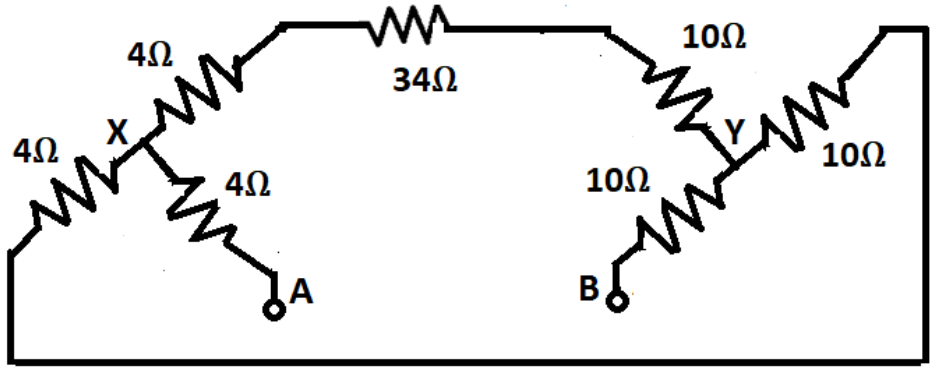
Solution:

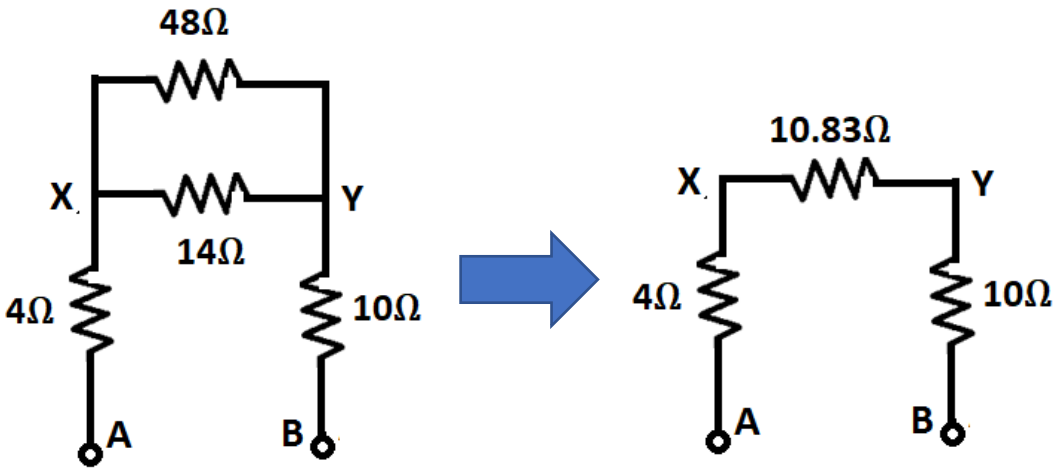




Star Delta Transformations – Numerical Example 4

Solution (Continued..) :





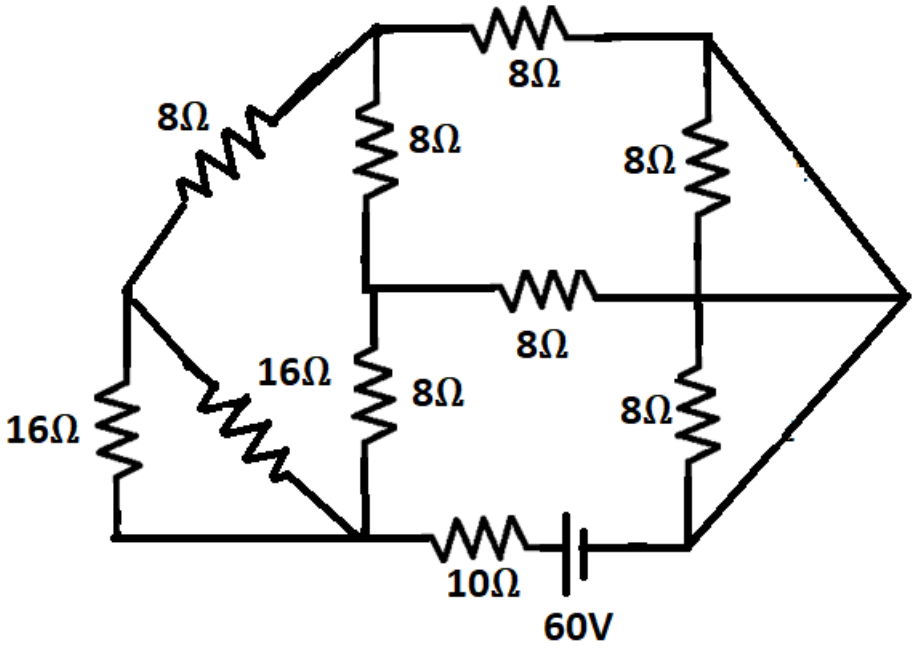
$R_{AB} = 24.83\Omega$

ELEMENTS OF ELECTRICAL ENGINEERING

Star Delta Transformations – Numerical Example 5

Question:

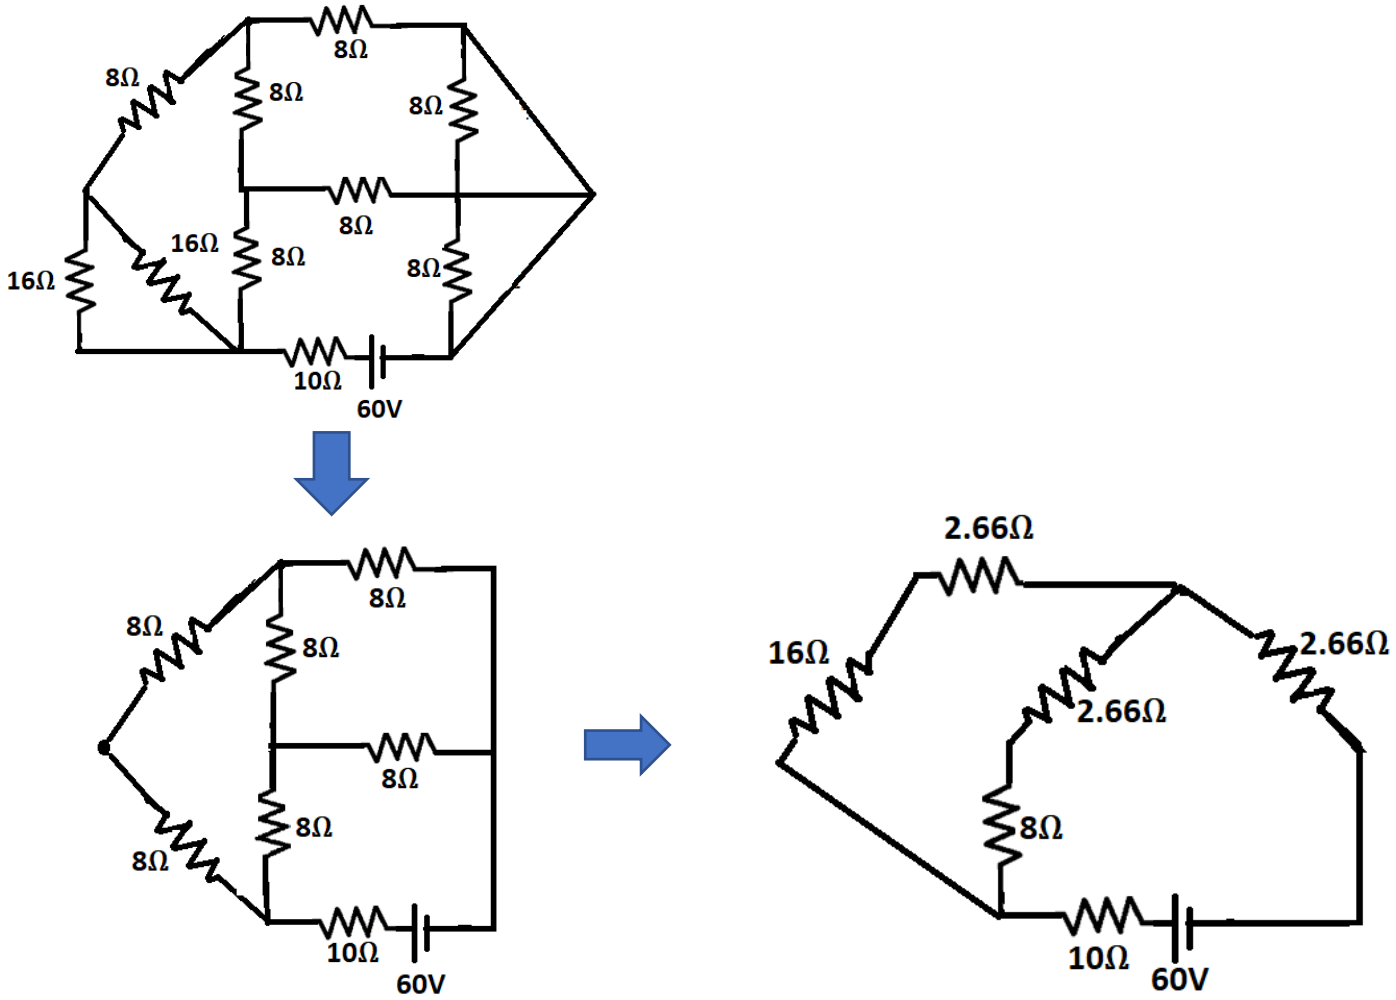
Find the voltage drop across 10Ω resistor in the network shown.



ELEMENTS OF ELECTRICAL ENGINEERING

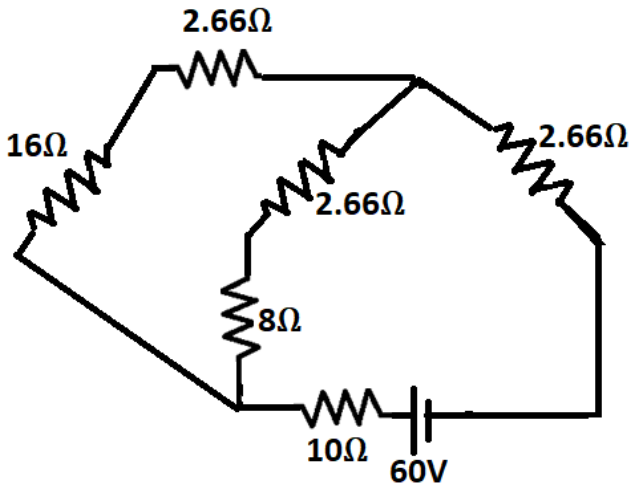
Star Delta Transformations – Numerical Example 5

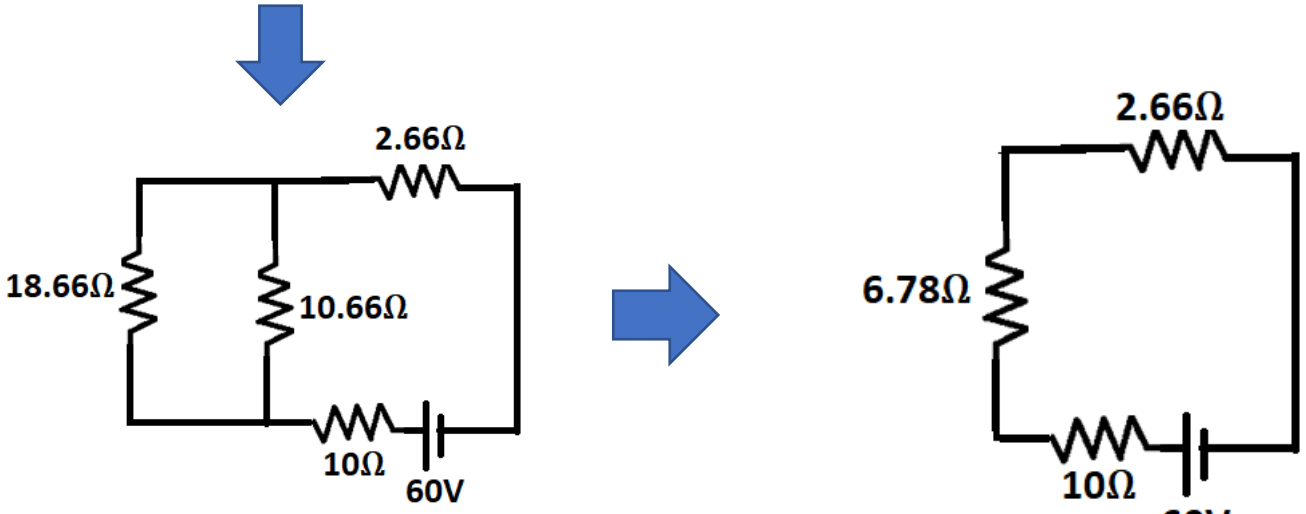
Solution:



Star Delta Transformations – Numerical Example 5

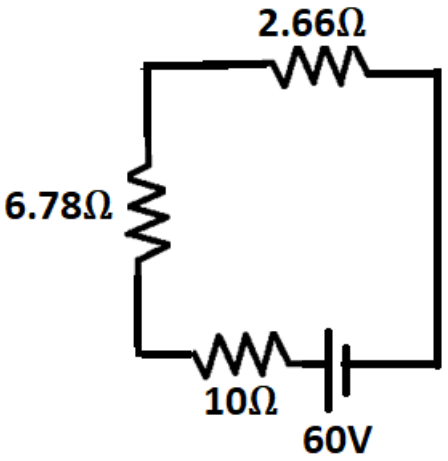
Solution (Continued..) :





Star Delta Transformations – Numerical Example 5

Solution (Continued..) :



Current delivered by 60V source, $I_S = \frac{60}{R_{eq}} = \frac{60}{19.44} = 3.086A$

Voltage drop across 10Ω resistor = I_S*10 = 30.86V
